For each of these elements one 'off-peak' month can be used in each financial year (April to March), for major planned maintenance, without incurring rebate payments, so long as airlines are notified in advance.

These off peak months are highlighted in the table above, with a D.

Pier Service (for passengers)

Pier Service measures the proportion of passengers who gain access to their aircraft direct from the terminal building, or gain access to the terminal building direct from their aircraft, either through a 'jetty' or 'air-bridge' or by steps onto the aircraft parking area. It also gives an indication of the extent to which coaching is avoided. The higher the percentage, the fewer passengers need to be coached between the terminal building and their aircraft.
